

## ALLERGY SENSITIVE PRESPRAY

- ✓ **FREE OF COLOURING AGENTS**
- ✓ **FREE OF PERFUMES**
- ✓ **FREE OF ORGANIC SOLVENTS**

Bennett Direct Allergy Sensitive Prespray is formulated to contain no colouring agents, perfumes or organic solvents. It meets the requirements of AS NZS 3733. It is a highly effective carpet cleaning soil emulsifier and is safe to use on 5th and 6th generation Stain resist and Stain release fibres. To be effective it must be used strictly as directed.

### ALLERGY CLEANING METHODOLOGY

Allergies and chemical sensitivities need to be acknowledged and accommodated by the professional cleaner. Almost all materials can produce an allergic response in some individuals. However there are a number of known allergy triggers that can be avoided. The most common sensitivities are to dusts and bioaerosols, organic solvents and respirable droplets, perfumes and colouring agents. Use of this product can eliminate many of these known and common allergy triggers.

Manufactured in Australia, exclusively for Bennett Direct

No liability is accepted for loss or damage caused by the use of this product. Users should pre-test to ensure that the product is suitable for their intended purpose.

### PREPARATION

Ventilate the area to be cleaned by opening as many windows as possible. Mechanical air handling strategies that will assist include using carpet fans (airmovers) to exhaust air to the outside, and the use of airscrubbers.

As dry particulates are the principal asthma trigger, thoroughly vacuum to remove as much dry soil as possible using a HEPA type vacuum cleaner. If you have suitable truckmounted equipment that can handle dry particulate this is the most effective way to exhaust dusts to outside of the living environment. Preferably, the sensitive individual should not be in the building during the cleaning process.

### DIRECTIONS

Dilute Allergy Sensitive Prespray at between 8:1 and 20:1 and apply directly to the carpet using a low pressure sprayer with a flat pattern nozzle to deliver a sheet of prespray to the carpet rather than atomized droplets in order to avoid an aerosolized mist. Allow a dwell time of 5 - 20 minutes but do not allow the prespray to dry out. Extract using only clean hot water with no additives. If spot cleaning or traffic lane boosting is required use only Allergy Sensitive Prespray, neat or diluted at up to 3:1. If you encounter cellulosic browning or old disclosed stains following extraction these can be treated with Type O Browning Remover according to the directions. Type O Browning Remover liberates oxygen as its active ingredient, which is not generally known as an allergen.

Do not use any other spotter. Do not use any deodorants. Always prequalify to the homeowner the restrictions you have on the use of specialized spot and stain removers.

### FIRST AID PROCEDURE

If swallowed, do not induce vomiting. Give a glass of water and seek medical attention. If in eyes, hold eyelids apart and flush continuously with running water for 15 minutes. Seek medical attention if any adverse symptoms persist.
